

# Mini project variant effect prediction

Gerard Bouland & Lieke Michielsen

# Mini project

- Every group gets a list of 7 SNPs
- Explore potential implications in the context of a disease
  - Which disease is associated with the SNPs?
  - Which genes are related to the SNPs?
  - What is the predicted effect of the variants?
  - Which cell types or biological processes could be involved?
  - What is known in the literature about it?
  - ...
- Present your results during a flash talk
  - 10 min. presentation
  - 2-3 min. questions
